Statistics: Mean 34.011; Variance 149.700; scale 0.227

Pred No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed. and is derived by analysis of the total score distribution.

ALIGNMENTS

The present sequence is a H. pylori cytoplasmic protein.

CC The present sequence is a H. pylori cytoplasmic protein.

CC infection or to identify H. pylori polypeptide binding compounds,

CC useful as potential H. pylori life cycle activators or inhibitors.

CC verlaping contigs generated by mechanically shearing the bacterial

CC overlapping contigs generated by mechanically shearing the bacterial

CC overlapping contigs generated by mechanically shearing the bacterial

CC and the predicted coding regions defined by computer evaluation. To

CC and the predicted coding regions defined by computer evaluation. To

CC identify likely H. pylori antigens for vaccine development, the amino

CC acid sequences predicted from various ORF were analysed for significant

CC homology to other known or exported membrane proteins. Having identified

CC and determined the sequences of interest, particular regions can be

CC isolated from H. pylori by PCR amplification for recombinant polypeptide

CC Sequence 370 AA; H. pylori cytoplasmic protein, 16ae10508orf10. Cytoplasmic; vaccine; prevention; treatment; infection; identification; binding compound; bacterium; life cycle; activator; bacteria; inhibitor; duodenal ulcer disease; chronic gastritis; diagnosis; envelope. Helicobacter pylori. w09640893-A1. Helicobacter pylori nucleic acid sequences and related polypeptide(s) - useful for vaccines to treat or prevent H. pylori infection, and to detect Helicobacter Claim 61; Page 1321-1322; 1481pp; English.                                                                                                                                                               Protease(s) and genes encoding them obtained from Thermococcus and Pyrococcus strains - have extremely high thermal stability and are useful industrially and as research reagents Disclosure; Page 100-108; 159pp; Japanese.

This sequence represents the protease from Pyrococcus furiosus. This sequence is a protease of the invention. The proteases of the invention have extremely high thermal stability. The proteases can used as research reagents, and industrially in the food, drug and

Yeast mitochondrial COXI gene intron aIZ-encoded protein (W16303)
can be used in a novel method for cleaving a double-stranded or
single-stranded DNA substrate. The method utilises a nucleotide
integrase, pref. a (reconstituted) ribonucleoprotein (RNP) particle
comprising an excised RNA transcript encoded by the group II intron
aIZ (see also T63319) of the COXI gene and a protein encoded by the
group II intron aIZ of the COXI gene. The RNP is incubated with the
DNA substrate in the presence of a divalent cation so that at least
one strand of the DNA substrate is cleaved and a nucleic acid
The course is attached to one or both of the cleaved strands. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pyrococcus furiosus hyper:thermostable protease gene - useful recombinant prodn. of hyper:thermostable protease Example 2; Page 57-64; 85pp; Japanese. The invention relates to a gene (T0814) that codes for a hyperthermostable protease (R87007) of Pyrococcus furiosus. A related DNA sequence (T08132) includes the coding sequence of the protease gene and encodes a protein (R87008) that

Sequence
        New nucleic acid encoding functional melatonin receptor of Xenopus for screening for potential (ant)agonists useful for e.g. treating cardiovascular disease and cancer Claim 5; Page 25-26; 62pp; French.
Sequences W25926-7 represent novel allelic Xenopus laevis melatonin receptor MEL-1A proteins. This sequence is a new form of the melatonin receptor designated MEL-1AA, hals sequence as Mel 1-c(alpha). The protein differs from previously known receptors by being 65 amino acids shorter and also having 2 different C-terminal amino acids. The protein is encoded by 2 different alleles (T79063-4) which differ in the 3'

New nucleic acid encoding functional melatonin receptor of Xenopus for screening for potential (ant)agonists useful for e.g. treating cardiovascular disease and cancer Claim 5, Page 30-31; 62pg; French.
Sequences W25926-7 represent novel allelic Xenopus laevis melatonin receptor MEL-la proteins. This sequence is a new form of the melator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Xenopus melatonin receptor MEL-1Ab.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 thought to affect the half-life of the mRNA. The coding sequence isolated from CDNA derived from Xenopus skin RNA and amplified usi primers T79067-76. The nucleotide sequence encodes a 7 transmembr receptor involved in cellular signalling. MEL-lAa has been shown inhibit adenylyl cyclase, but both proteins can modulate intracell cGMP, esp. inhibiting its accumulation induced by an inhibitor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mRNA; half-life; skin; amplification; primer; polymerase chain react

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      receptor designated MEL-1Ab, also known as Mel 1-c(beta). The protein differs from previously known receptors by being 65 amino acids shorter and also differs throughout the sequence by 6 amino acids. The protein is encoded by 2 different alleles (T79065-6) which differ in the 3' untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The coding sequence was isolated from cDNA derived from xenopus skin RNA and amplified using the primers T79067-76. The nucleotide sequence encodes a 7 transmembrane receptor involved in cellular signalling. MEL-1Ab has been shown to modulate intracellular cGMP, esp. inhibiting its accumulation induced by an inhibitor of phosphodiesterase, but unlike the MEL-1Aa protein, it cannot inhibit adenylyl cyclase activity.

                                                                                                                                                                                                                                                                                                       The present sequence represents a recombinant squirrel protease inhibitor protein 55RS that contains a specifically claimed reaction site, see features table. The protease inhibitor 55RS has inhibitory activity against trypsin, elastase or thrombin. The protease inhibitor has a new structure similar to alpha-1-antitrypsin and shows selective inhibitory activity against proteases. The protease inhibitor cDNA was homologous to cDNA encoding a similar squirrel protein designated
                                                                                                                                                                                                                                                                                                                                                                                                                                      protease(s)

High-affinity melatonin receptor.

Melatonin receptor; G-protein-coupled receptor; glycosylation;
Melatonin receptor; G-protein-coupled receptor; glycosylation;
disulfide bond; ligand binding pocket; phosphorylation;
cytochrome-c family heme binding site; melatonin receptor-agonist;
melatonin receptor-antagonist; circadian rhythm disorder; jet-lag;
day-night cycle disorder; ovulation; reproductive cycle; antibody;
animal breeding; puberty; transgenic animal; drug screening.

The receptor is a membrane protein, and coupled to guanine nucleotide binding proteins (G-proteins), and has 7 hydrophobic putative transmembrane domains. The N-terminus coupled as 7 hydrophobic putative transmembrane domains. The N-terminus coupled as 7 hydrophobic putative transmembrane domains. The N-terminus coupled as 7 hydrophobic putative transmembrane domains. The N-terminus coupled creceptors, and 2 Cys residues in the 1st 2 extracellular loops may command to the negative of the N-terminus coupled creceptors, and 2 cys residues in the 1st 2 extracellular loops may command to a stabilizing disulfide bond. Pro residues in transmembrane coupled command to a stabilizing disulfide bond. Pro residues in the 1st 2 extracellular loops may command to a light of the 1st 2 extracellular loops may command to receptor of a light binding pocket. Phosphorylation sites in the coupled in receptor isolation of sheep mouse and human creceptor sequences. Receptor fragments which interact with melatonin, or specific antibodies, may be used in therapy of circadian rhythm disorders such as jet-lag or day-night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transgenic animal for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

This is the amino acid sequence of the barnacle (Megabalanus rosa) adhesion protein. The corresp. gene was isolated from a cDNA library using the probe T05723 which is derived from amino acid sequencing of the purified protein. The gene is used to produce an adhesive protein which can be used in water.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LT 11

FELV F6A provirus clone 61E encoded nucleocapsid FeLV; retrovirus; vaccine; AIDS; disease model; iviraemia; leukaemia; therapy; nucleocapsid.

Feline immunodeficiency virus subtype A.

Feline immunodeficiency virus subtype A.
Inactivated FeLY-A sub-type isolates for use in disease vaccines - can be used to study prophylaxis and therapy immuno-deficiencies in other species, e.g. human. Disclosure; Fig 1; 22pp; English.
The nucleocapsid protein (R94427) and envelope protein sequences of felline leukaemia virus provirus F6A clone (deduced from open reading frames identified in the provided protein sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         N-PSDB; T05722
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Megabalanus rosa.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (T13265). Clone 61E is replication competent and capable of inducing persistent viraemia in cats. Host cells, e.g. feline cell can be transformed with DNA derived from 61E and used to produce infectious virus useful in vaccines, in the generation of viraemia and in disease challenge systems.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      M.tuberculosis small ribosomal subunit S12 protein fragment. streptomycin; antibiotic; susceptibility; sensitive; resistar rpsL; mutant; small ribosomal subunit; S12 ribosomal protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding virus-A sub:type - producing AIDS type disease in cats, used to test drugs and vaccines.
Claim 6; Fig 1.1-17; 23pp; English.
Variant of viral genome induces immunodefficiency in cats similar NAIDS. May be used in research, especially in testing drugs and vaccines against vireamia and and feline leukaemia viruses.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents T. littoralis DNA polymerase. The DNA CC sequence encoding this protein contains introns decribed in the content of the protein sequence appears to be translated through these intronic sequences. Only a portion of the DNA CC plymerase protein sequences. Only a portion of the DNA CC T. littoralis DNA polymerase gene sequence may be derived from the patteriophage NEB #619 on an approx. 14kb BmmHI restriction fragment. CC when this gene is transformed in to E. Coli and expressed in its centificity, it is found to be unstable. There is a high frequency of contaition in the polymerase gene, cell growth is slow and there is some degree of cell mortality. This instability is due in part to the presence of the two introns. It is thought that the intervening DNA in this sequence encodes a separate protein which may be spliced out at the protein level. The second, 1170bp, intron has been found to corde for an endonuclease which self splices out in E. coli. To improve stability of the DNA when it is expressed in E. coli, the Specification states that it is desirable to delete the introns of the expression vector into E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Example 2; Fig 14; 97pp; English.

The rpsL gene of M.leprae encodes the S12 protein of the small ribosomal subunit that is responsible for resistance to streptomycin. Two primers were designed based on this sequence and were used in a PCR amplification of M.tuberculosis DNA. Sequence analysis of the 306bp amplified fragment showed 28 differences between the rpsL gene from M.leprae (051533) and M.tuberculosis (061454). In streptomycin resistant strains, a single amino acid substitution due to a mutation in codon 43 (wild-type AAG mutated to AGG) was identified; substitution of Lys42 by Arg results in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    18-DEC-1992; 311622.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The major iron-containing protein of Legionella pneumophila
is an aconitase homologous with the human iron-responsive
element-binding protein.
                                                                                                                                                                                                                                                                                                            B48642 #type complete

J. Mol. Biol. (1995) 251:378-389
The mitochondrial LSU rDNA of the brown alga Pylaiella
littoralis reveals alpha-proteobacterial features and is
split by four group IIB introns with an atypical phylogeny.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Science (1997) 277:1453-1462

This protein responds to changes in serine concentration in the environment, transduces a signal from the outside to the inside of the cell, and facilitates sensory adaptation through various levels of methylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ##molecule_type DNA

EMBO J. (1987) 6:713-721
Three suppressor mutations which cure a mitochondrial RNA
maturase deficiency occur at the same codon in the open
reading frame of the nuclear NAM2 gene.
                                                                                                                                                                                                                                                submitted to the EMBL Data $20170

#title Divergence of the mitochondrial leucyl tRNA synthetase genes
in two colosely related yeasts Saccharomyces cerevisiae and
Saccharomyces douglasii: a paradigm of incipient evolution.
